

UAS AIRPORT HANGAR

On February 5th the Salisbury Regional Airport (SBY) opened the first Unmanned Aircraft Systems (UAS) hangar on the East Coast.

This one of a kind hangar is open to the public for use as a dedicated launch and recovery site. Sentinel Robotic Solutions (SRS) is the Operator of the brand new 5,000 square foot hangar.

//

The hangar will be home to testing, training, and development of UAS projects through partnerships with universities, high schools, and commercial companies.

- Tony Rudy, (Airport Manager)

Fisher Architecture was proud to be brought in to do the tenant layout for the Drone Hangar, and is excited to see what will come out of this community hub for discovery and innovation.

FROM BJ'S TO ATLANTIC BEACH HOUSE

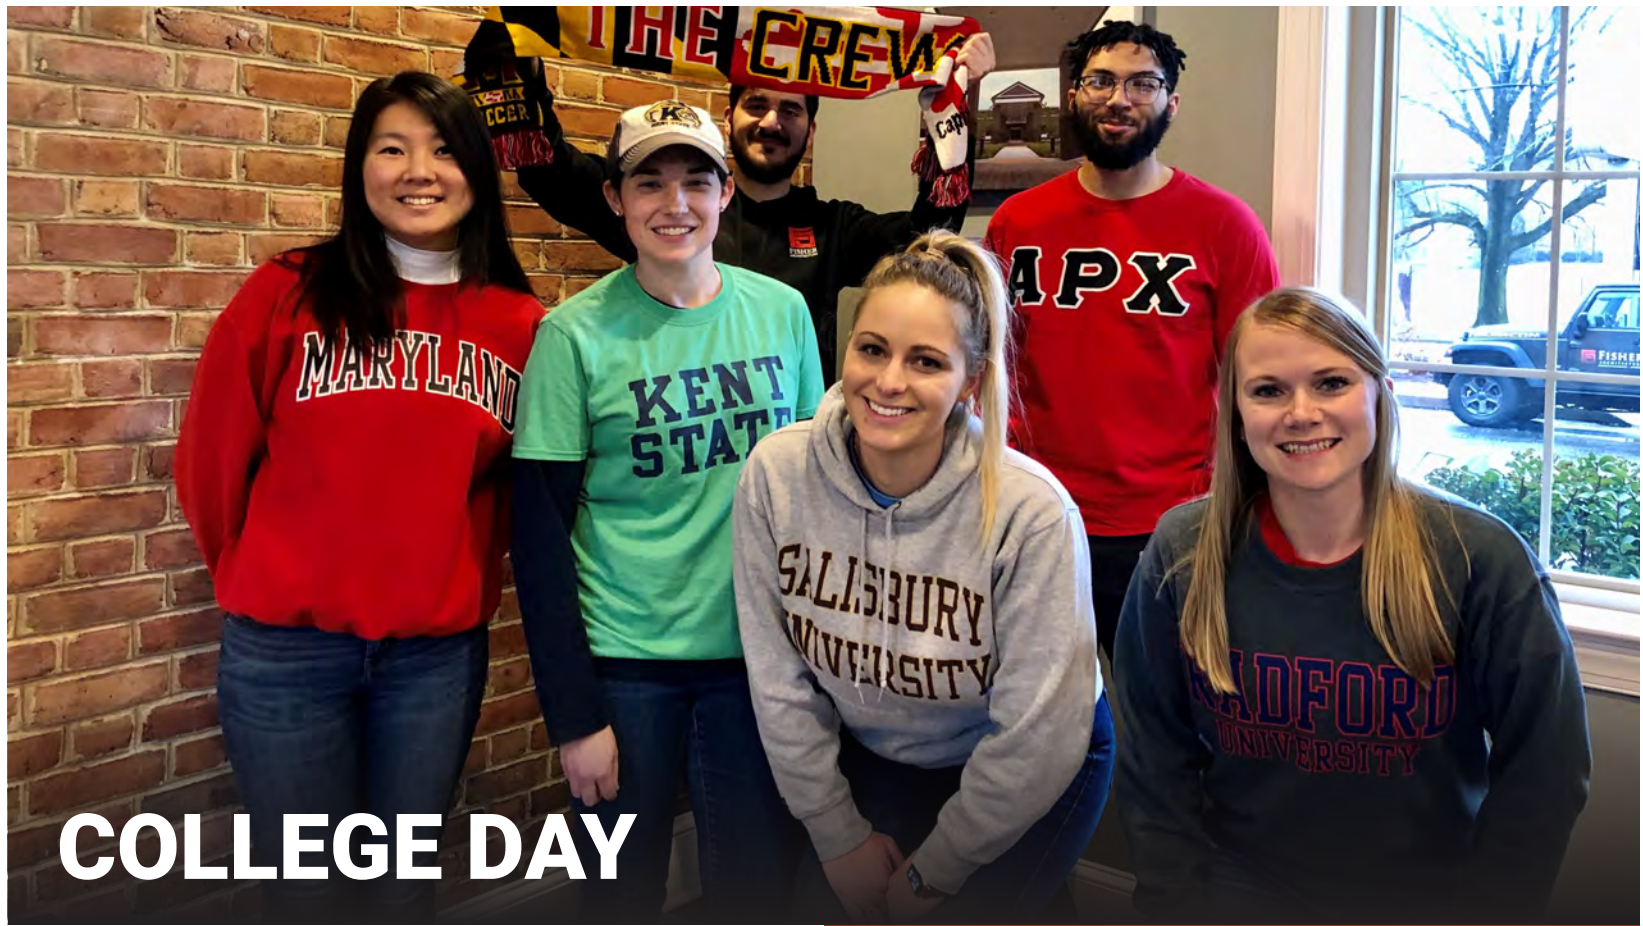

This replaces the iconic BJ's on the Water that had to close their doors earlier this year. This new restaurant will include a sandy beachfront area along the water, nearly 9,000 square feet of dining - including over 700 square feet of rooftop terrace with a bar.

Fisher Architecture is working with Ropewalk Properties to design and construct a new two-story bayfront establishment.

“ This was an iconic, local's restaurant in Ocean City for decades. Having the opportunity to work on it and design something that respects the past by engaging with the bayfront is an honor. The new restaurant will enhance panoramic bay views and provide a bayfront beach area.

- Keith Fisher

This new spot will be called Atlantic Beach House and construction is set to begin Fall 2021, with an anticipated completion of Summer 2022.

COLLEGE DAY

Our team had a great day coming together and repping some of their favorite college gear.

//

I love that Fisher encourages bonding experiences like College Day!

- Haley Echard
